Matrix42 Package Robot

MATRIX42

Quickly create and record software packages using the Matrix42 Package Robot:
Record, Install, Repeat.

Matrix42 Package Robot makes recording a software installation a snap! The recorded installation packages can then be repeated over and over again with the click of a button. The recorded process, including mouse and keyboard entries as well as browser authentication, is packed as an .exe file. Simply launch the executable file to perform the complete error-free installation process. It is so easy to use, even "newbies" with no technical knowledge can use the product to create packages.

Let the robot do the heavy lifting.

Matrix42 Package Robot goes way beyond standard packaging methods. The program detects typos and text similarities and matches entries or window text with default specifications. It also features web content packaging and accounts for registry forms and browser windows commonly used for installation. Just record an install once, and repeat it as many times as needed.

As it turns out, the easiest way to create installation packages for distributing software in the corporate network is also the best-practice process used by the installation recorder. Updating and installing software can be a risky proposition even when only a few workstations are involved. This takes the burden off of IT, yet maintains the expert touch.

Product Features

- **Wizard-guided setup** and recording makes for fast, simple packaging.

- **Reduce costs** with automated administrative tasks and complex application and web application roll-out support.

- **Integrated installation recorder** is a WYSIWYG recorder that captures the process in the background automatically.

- **Integrated editor** with 800 script commands for items such as hidden windows and recording web queries.

- **Automated execution** of all routine tasks in Windows environments.

- **Online registration** enables easy integration with web key access and other browser authentication methods into packages.

- **Easy-to-use controls** means programs can be easily modified in menus, buttons and lists.

- **Minimal training** is needed with the Package Robot. All lines of business can create their own packages without deep technical know-how, which reduces the IT workload.

- **Cryptographic encoding** enables subsidiaries to use the same script even with different data formats.
